PPJ FRAMEWORK WORLD'S BEST COMPONENT LIBRARY

for Unify/Gupta Applications Migrated to .NET and HTML5

The PPJ Framework is a .NET component library, entirely written in C#, that replaces Team Developer functionality. Every feature of Team Developer has been re-implemented and enhanced in C# using standard .NET components and state-of-the-art extensions.

It's solid, constantly tested, relentlessly updated, fine tuned, fast, reliable and you get the source code too!

What if you had the source code for Team Developer runtime and it was small, clean, readable and easily manageable object oriented C# code?

MODERN, EXTENSIBLE AND RELIABLE APPLICATIONS

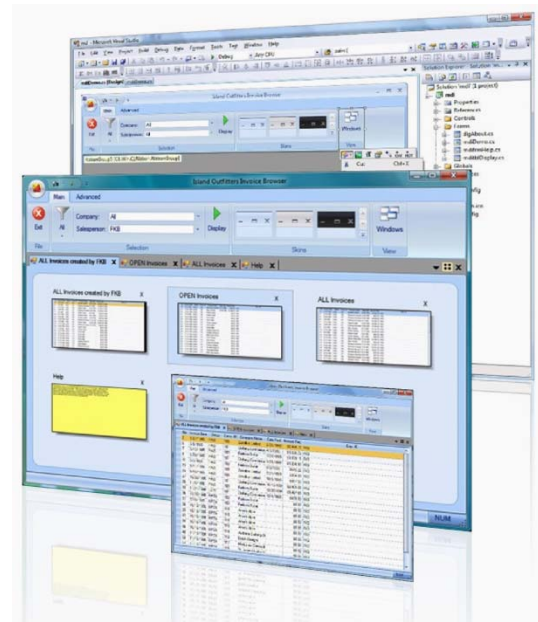

Ported applications are modern, fully extensible and extremely reliable.

Modern features are available to migrated applications immediately, without having to rewrite or change code. We provide full access to our source code through daily development builds and frequent stable builds.

Bugs are usually fixed within 24h and made available to developers immediately.

KEY FEATURES

- Dynamic SQL
- All Team Developer Controls
- Visual Toolchest Controls and Functions
- Third Party Libraries: XSal2, M!Table, Bulding Blocks.
- SalCompileAndEvaluate
- All ADO.NET, OLEDB, ODBC drivers are supported
- Powerful Skinning Engine with Skin Editor
- Fully Editable Ribbon Bar System
- Powerful Grid based on Flexgrid.NET
- Integrated Standard Spell Checker
- Tabbed MDI With Automatic Thumbnails

COST?

Less than the alternatives, including migrating to TD 5 or 6 and staying with SAL, a language designed in the previous century.

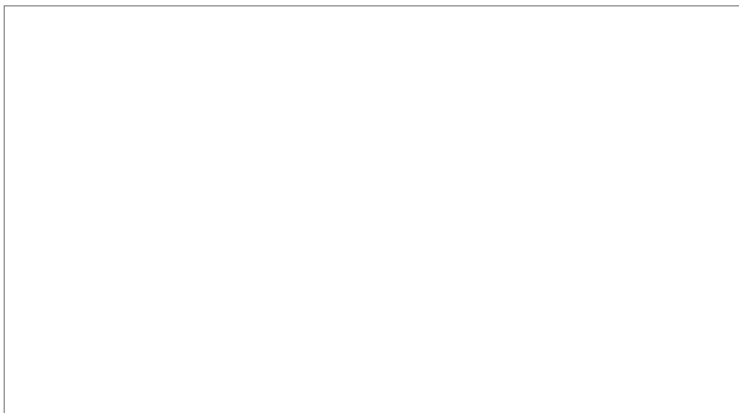

RISK?

Zero.

QUESTIONS?

We are available worldwide to answer any question you may have. We can arrange a personalized webinar for you and/or a meeting where we can show you a demo of your application migrated to .NET.

Visit www.iceteagroup.com for a Personalized Webinar.
