

Join the Evolution

Migrate from Unify/Gupta
proprietary development tool to
the modern Microsoft .NET technology.

Features to die for!

Speed, Reliability, Look & Feel, Superior Productivity, Distributed and Real Web Applications are only some of the incredible benefits that you get by switching from a dated technology to a modern platform preserving your valuable software.

Managers can plan for the future, focus on new functionalities and grow their products and market share.

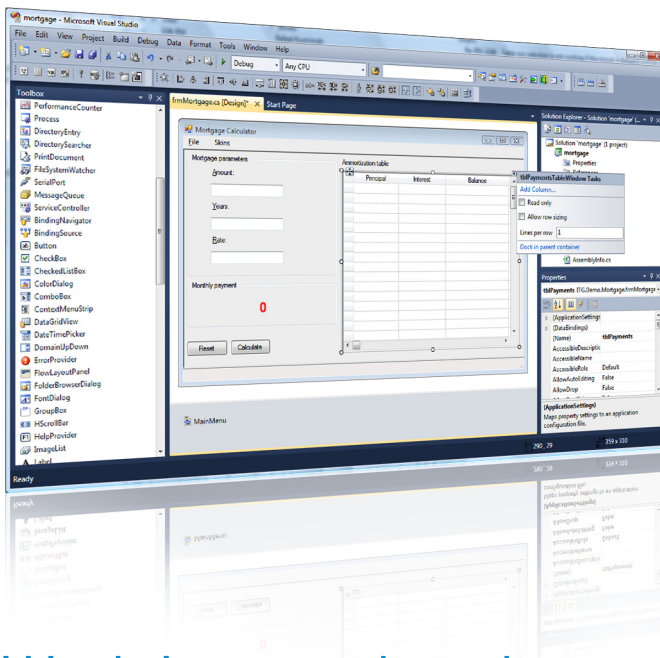

Developers enjoy working with a state-of-the-art Development Tool and a modern programming language.

Join the Evolution

Modern tools set your ideas free!

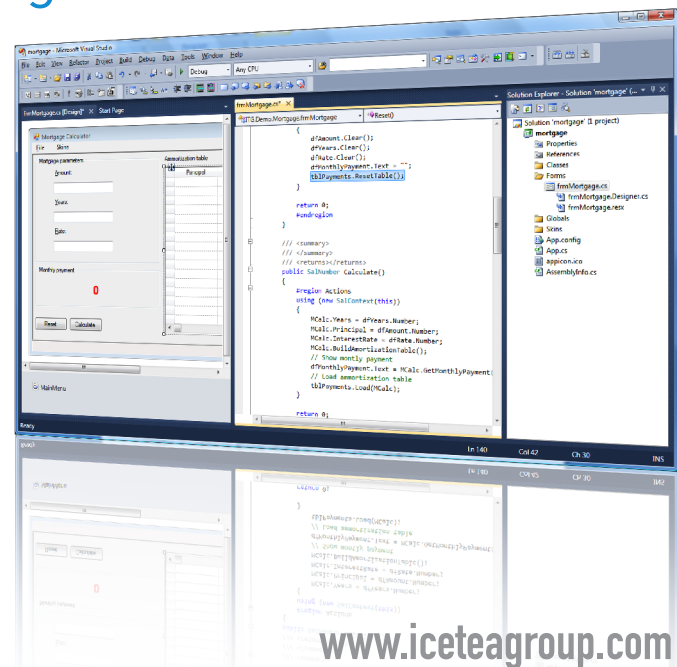

Visual Studio 2008 and 2010

Visual Studio is the most used Integrated Development Environment (IDE) in the world, and not just because it's Microsoft. Its flexibility, ease-of-use, reliability, speed, countless tools for developers and managers make it a pleasure to work with.

You deserve no less!

Work in a modern language: C# or VB.NET

We are in the 21st century. Working with a modern language and tools is fundamental for the success of any software project, just like using power tools is a no-brainer for any construction worker.

Comprehensive Skin Engine with Skin Editor

A modern and personalized User Interface (UI) is an expression of strength. Our integrated and comprehensive skinning system allows migrated Unify/Gupta applications to achieve the impossible.

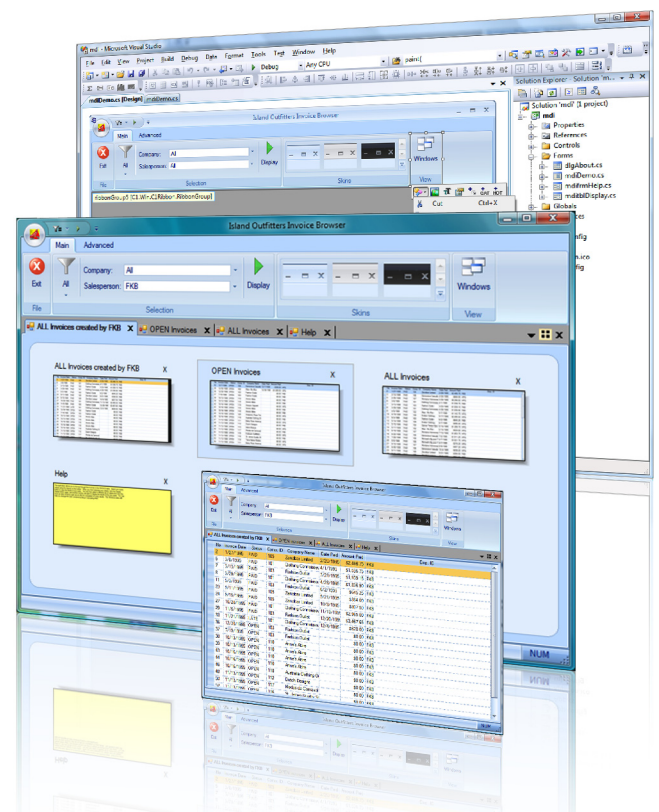

- Advanced skin designer
- Support for all Windows controls
- Support for all Common Controls
- Support for all Visual Toolchest controls
- Support for all System Dialogs
- Import any standard skin file using Microsoft's format

Modernized Look & Feel across the board

With the flip of a property you can finally achieve what the “big guys” have been doing for years. Turn your aging User Interface into a modern and streamlined Fluent Interface for a better user experience.

Our innovative Tabbed MDI with Thumbnails, state-of-the-art Ribbon Component (supports Windows 7 new look), and advanced Ribbon Designer give you the powerful features that you need today.

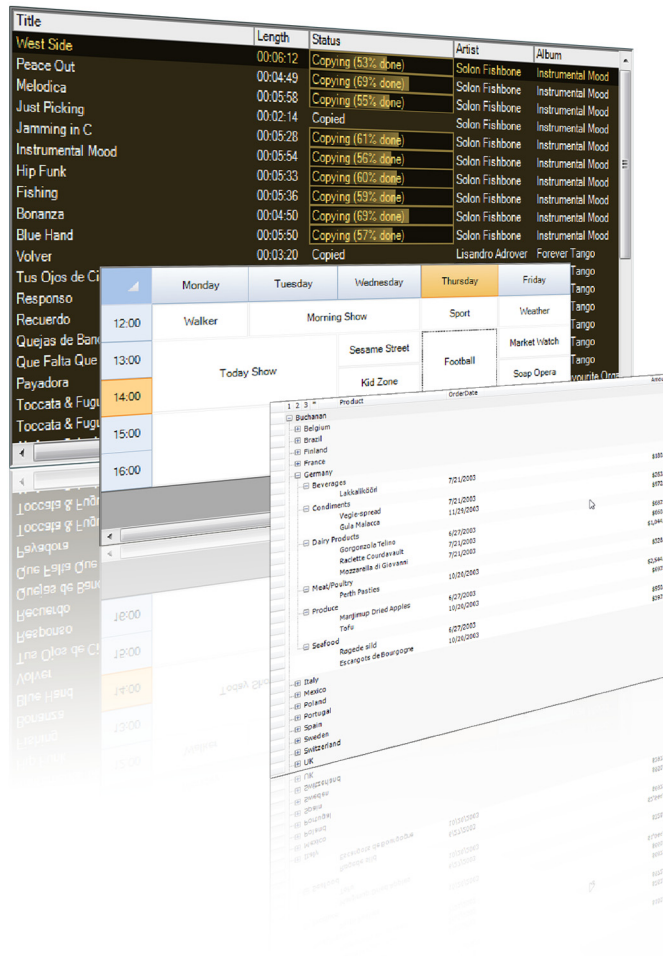

Solid Grids are already here!

Need a real powerful grid? Our solution supports 100% of the functionality found in your current Gupta/Unify application and much more:

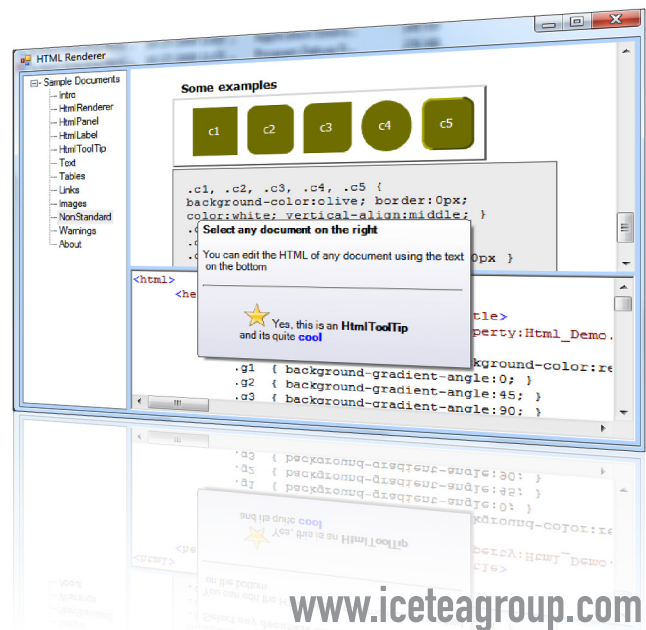

- Hidden rows
- Locked columns
- Split rows
- Hierarchical views
- Merged cells
- Images in any cell
- Coloring and custom drawing
- Unlimited rows
- Background loading

Don't like the grid we provide? Using our technology you can switch the underlying grid without changing your code.

HTML Everywhere

We have extended text controls (labels, buttons, check boxes, grid cells, and tooltips) to support HTML rendering everywhere. Using few simple tags you can enhance your migrated applications in ways that are unthinkable today.

Innovative Server Oriented Architecture

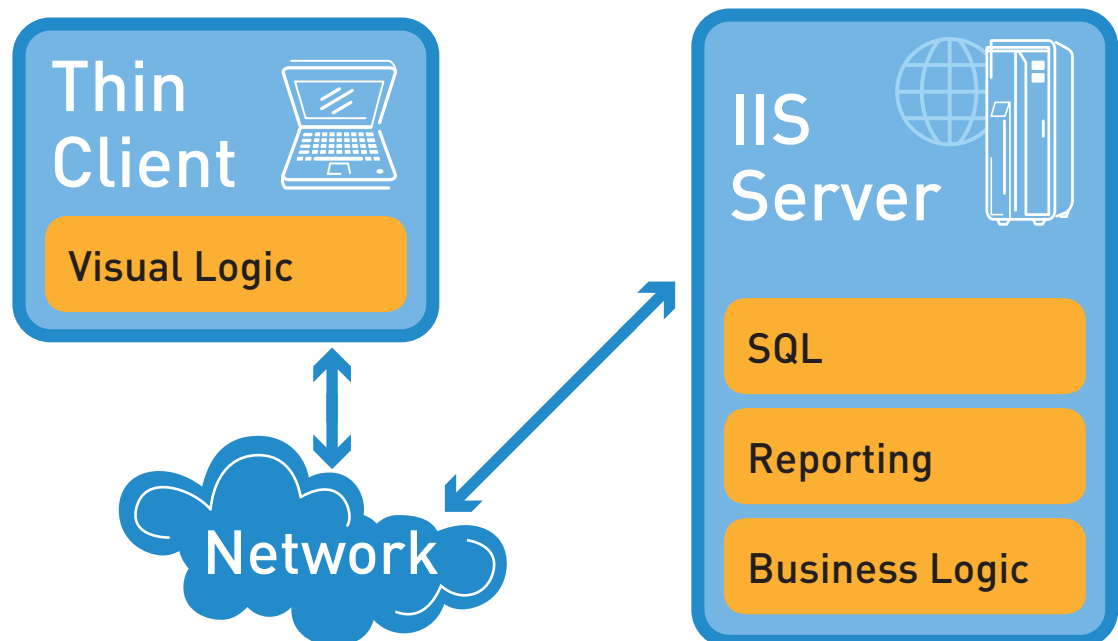

Our groundbreaking distributed technology gives your migrated applications a solid multi-tier foundation to build upon. Without changes to your code you can move the SQL layer, Reporting layer and Business Logic layer to the server.

Everything is based on Microsoft Window Communication Foundation (WCF), including scalability, security and authentication.

Our server-side PPJ Services™ technology includes a built-in Web Configuration system to manage distributed resources and the new customizable event handlers. Ever thought of adding custom triggers to SQL, Reporting, and Object calls in a central location?

Thanks to our new SOA technology, migrated applications can run [anywhere on the Cloud](#) and continue using the same database and reports through reliable Web Services!

The same resources that are now locked in a proprietary technology from the '90s can be [shared by other systems in the organization](#) through a standard Web Service Interface.

Real Web Applications using Ajax or Silverlight

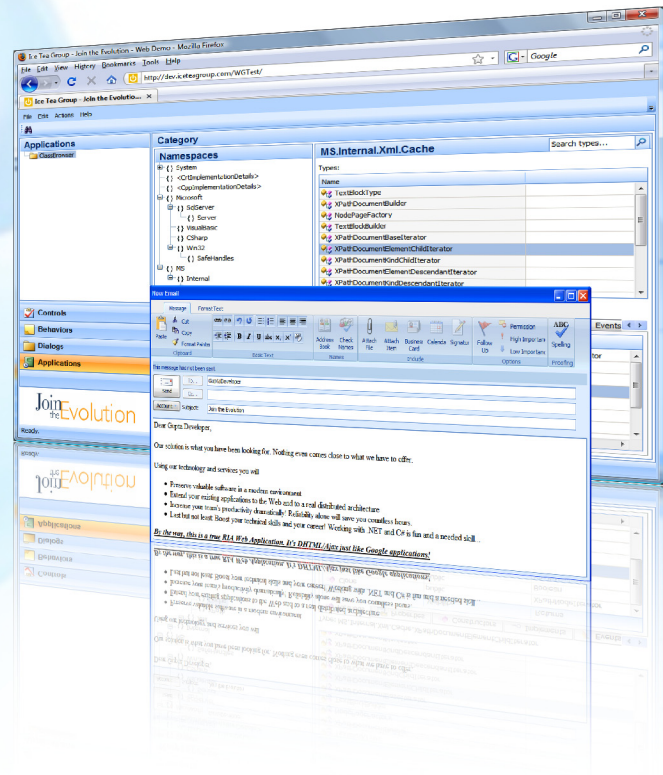

Microsoft®
Silverlight™

Rich Internet Applications (RIA) are the future of Web Applications. Using our advanced technology you can now place your entire migrated Unify/Gupta application on the Web Server! Your clients will receive standard DHTML/Ajax or Silverlight forms and experience a true Rich Internet Application.

- Scalable
- Optimized for the Cloud
- Fast, flexible and reliable
- Secure by design (military-grade)
- Supports all Team Developer and Windows controls
- Includes Ribbon, Skins, Charts, Flash, XAML
- Works with multiple Browsers and Operating Systems

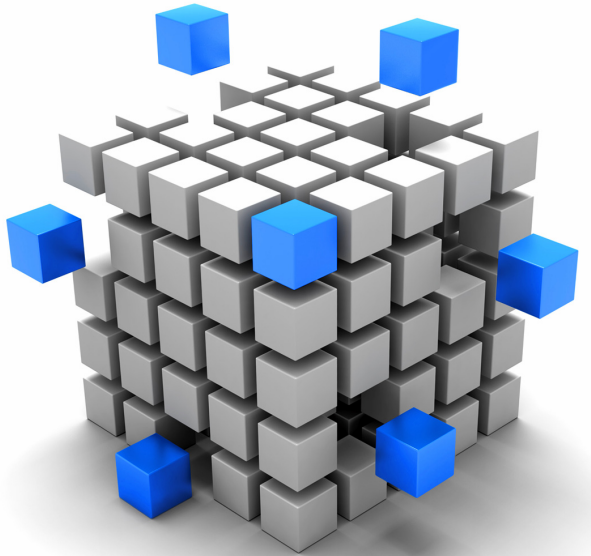

Don't believe it? Contact us and we'll be happy to show you.

Reliability = Increased Productivity, Reduced Risk

Stop spending your valuable time reinventing the wheel, debugging somebody else's bugs and begging for features that are standard everywhere else. If you have to check that your data has been saved correctly in the database then you have a serious problem with the technology you are using.

ADO.NET, Unicode, Debugging, Visual Code and Business Code, Comprehensive Class Library, Wizards, a huge community of developers and an enormous availability of resources makes it obvious that working with Visual Studio and C#/VB.NET is more productive.

Modularized and agile systems

Tired of large monolithic systems that are hard to deploy and to manage? During (and after) the conversion process we split your system into shared modules. Real shared and dynamic modules that can be updated and deployed individually and are used by multiple applications.

Using Microsoft's Click-Once deployment you can deploy the application files as needed directly to your users desktops or to their browsers as Browser Applications (XBAP).

Using modern Application Streaming technologies you can stream the code as it gets executed on locked-down workstations!

Why settle for less?

Let's get serious, contact us and we will help you make the right decision for your team, for your valuable software and for your organization.

Our broader focus and unmatched expertise with Gupta software guarantees the future of your systems.

PPJ Framework

- Team Developer + Functionality

PPJ Web Applications

- Rich Internet Applications, AJAX, Silverlight

PPJ Framework 2009, 2010

- LINQ, Skinning, Ribbon, new components, Tabbed MDI, Skin Editor, HTML Text, Tracing

PPJ Services

- Service Oriented Architecture, SQL Service, Reporting Services, Object Services, ...

Cost?

Less than the alternatives, including migrating to TD 5 or 6 and staying with SAL when all factors are counted in.

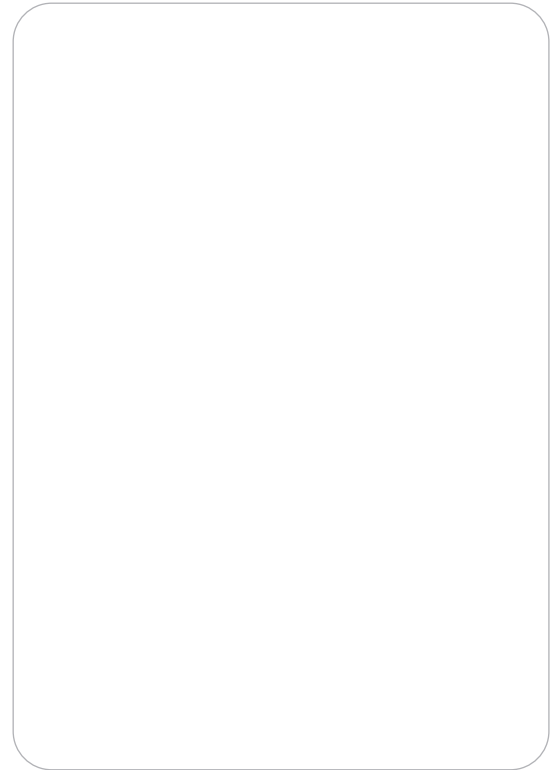

Risk?

Zero.

Questions?

We are available worldwide to answer any question you may have. We can arrange a personalized webinar for you and/or a meeting where we can show you a demo of your application migrated to .NET.
